PAYTM BUILD FOR INDIA AI HACKATHON · BENGALURU

Saathi

A team of AI agents that owns a revenue target for every Paytm merchant

Track 3: Autonomous AI Teammates

Team: Saathi
Member: Amit Mishra

PROBLEM STATEMENT

Money leaks silently, and nobody owns it

Ravi's kirana Soundbox in Jayanagar went silent on Friday. He found out on Monday, after three days of missed payments.

Silent revenue leaks

A Soundbox offline for days, failed settlements, a broken QR. The merchant loses payments, Paytm loses volume, and no one notices until a complaint.

Teams only react

Support works the ticket queue. Issues get fixed after the merchant calls, often days later, by agents checking 3 to 4 systems by hand.

Sales calls go out cold

Loan and device upgrade calls ignore what is happening in the merchant's business, including the issue they faced last week.

Language and reach gap

Small merchants prefer to talk in Hindi, Kannada, Tamil and other languages, on a call. Vernacular agent capacity is limited and costly.

Today's bots answer questions. Nobody owns the outcome: rupees recovered and earned per merchant.

PROPOSED SOLUTION

Saathi watches, acts and reports in rupees

A team of specialist AI agents with one shared target: ₹ recovered and ₹ earned across the merchant base.

Watch

Tracks device, settlement and sales signals for every merchant

Diagnose

Finds the root cause and ranks merchants by ₹ at stake

Plan

Picks the playbook: fix, follow up, then a relevant offer

Act

Calls the merchant, retries settlement, sends a field agent, shares an offer

Check and learn

Compliance clears each action; outcomes improve the playbooks

One manager, four specialists

A manager agent assigns work to Diagnoser, Fixer, Seller and Compliance agents. Anything risky or high-value goes to a human for approval.

The demo moment

A live call in Kannada: Saathi spots a failed settlement, retries it, confirms with the merchant, then offers a loan they qualify for. The ₹ dashboard updates live.

Signals in, an agent team decides, real actions out

Voice

Sarvam AI Saaras and Bulbul · Exotel or Twilio · WhatsApp API

Agents

LangGraph · Sarvam-M for Indic reasoning · frontier LLM for planning

Data

RAG on SOPs (pgvector) · PostgreSQL · FastAPI · React dashboard

Actions

Paytm PG sandbox (real) · merchant APIs simulated, swappable

USP

Why Saathi is a teammate, not a chatbot

Owns an outcome in ₹

Measured on rupees recovered and earned, not on replies sent or tickets closed.

Finds problems first

Watches every merchant and acts before the complaint, while the money can still be saved.

A team, not a bot

Specialist agents for diagnosis, fixes, sales and compliance, coordinated by a manager agent.

Vernacular and voice-first

Talks naturally in the merchant's language on a normal phone call, using Sarvam AI's Indic models.

Learns from your best

Turns top human agents' calls into playbooks and gets better with every outcome.

Safe by design

Checks consent, TRAI DND and calling hours, and RBI Digital Lending rules before acting. Full audit trail.

Other voice bots wait for questions. Saathi hunts for lost money and acts.

IMPACT AND BENEFITS

Every merchant watched, every rupee counted

100%

of merchants watched daily, not only those who call

60%

of common issues fixed without a human

< 1 hr

from problem detected to fixed, often before the merchant notices

2×

sales conversations per rep, with full context

Pilot targets we will validate during the build and in follow-up pilots

Merchants

- Fewer missed payments from device downtime
- Help in their own language, any time
- Right-time credit and upgrades

Paytm teams

- Agents focus on complex, high-value cases
- Lower cost per resolved ticket
- Every call ends with a clean CRM summary

Business

- Revenue recovered and earned, tracked live in ₹
- Less merchant churn
- Higher loan and device upgrade uptake

BUSINESS MODEL

Pays for itself through savings and revenue

Cost savings

Each ticket Saathi resolves costs a fraction of a human-handled call. Savings grow with ticket volume, and agent headcount scales slower than the merchant base.

Revenue uplift

The Seller agent drives loan disbursals, Soundbox and EDC subscriptions, and insurance attach. Paytm earns its existing fees and commissions on every conversion.

Platform play

Later, offer Saathi as an outcome-priced SaaS (per resolution or per conversion) to Paytm's lending partners, NBFCs and other fintechs.

ROLLOUT

Hackathon → **Pilot** → **Scale**

Live agent team on real calls: 3 leak types, 2 languages, 1 sales play

One city in shadow mode with human review, measured in ₹ recovered

All merchant segments, 10+ languages, Saathi owning a ₹ target
